

Building Teacher Excellence Corps

Sunday, January 05, 2020

Dr. Veena Kumar

University of Maryland Global Campus

Excellence in teaching is hard to define but easy to observe. Building excellence involves developing not only skills for effectively managing one's professional responsibilities but also nurturing attributes for personal growth.

The focus of this hand-on workshop will be to identify the skills and attributes required for achieving excellence in teaching. Using the basic framework of Lowman's 2D Model of Effective Teaching, three major issues faced by every engineering educator – *managing vast course content*; *managing student motivation*; and; *managing personal growth*, will be discussed. Working on short individual and small group activities, the participants will examine options, identify viable solutions, and make plans for implementation.

Only IIEECP Certified are eligible to participate in this Workshop
